Transparent Video Systems Announces Successful Integration with Azar Billing and Management Systems

Independent CATV Operators gain competitive advantage with TVS and their full integration of billing, management, CAS, EPG and SMS

San Carlos, CA (USA) - October 26, 2009, Transparent Video Systems (TVS) announced today the successful integration of Azar Computer Software (Austin, Texas), billing and management system with the Transparent Video Systems Challenger™ Platform, the all-digital Headend solution for CATV Independent Operators. The combination of Azar billing and management systems and TVS Challenger, enables a very smooth and quick system conversion from analog to digital. This new integration further enhances the Challenger Platform making it the most cost effective Headend solution available today. When combined with everything HITS is transporting including off the air SD and off the air HD, the Challenger Platform becomes competitively priced around \$150,000* installed.

Challenger Platform delivers a triple home-run

Joining the full integration path for end-to-end all-digital CATV network, is the TVS licensed Abel Quintic CAS System for the Independent Operator market in the US, a true alternative to the other open platform CAS systems. This modern CAS solution was written from the ground up to use less resources, reduce cost and speed installation.

"We are very fortunate to be working with companies such as Azar Computer Software and Abel Quintic, who have a long and successful record in the CATV industry," said Norman Gillaspie President of Transparent Video Systems. "Finally, Independent Operators and MDU Service Providers can compete on a level playing field, and with an affordable investment that will deliver immediate profits well into the future."

About Transparent Video Systems

Transparent Video Systems is a leading provider of complete CATV headend systems, delivering both digital and analog content and MPEG-2 to MPEG-4 ready applications. The TVS Challenger™ platform is a fully-integrated cable solution that enables telecom service providers, cable operators, and others to generate additional revenue, increase profits, and raise customer satisfaction by delivering advanced digital television services. Proven through more than a half dozen global deployments, TVS's patented software and hardware technology is built on open standards, allowing providers easy customization of services and the viewer experience at a fraction of a closed-standards system.

Transparent Video Systems Inc., is a privately-held company with headquarters in San Carlos, California, USA. For more information contact: www.transparentvideo.net *Contact TVS for specific details on this Challenger Platform configuration.
