**COMMUNICATION SERVICES SELECTS
TRANSPARENT VIDEO SYSTEMS TO SUPPORT DIGITAL CABLE ROLLOUT
AT POINT MUGU NAVAL AIR BASE**

TVS Challenger™ Platform won the bid for Communication Services of Ventura, California, to help them transition to an all-digital cable service.

SAN CARLOS, California (USA) – March 24, 2009, Transparent Video Systems Inc, announced today being selected as the finalist by Communication Services of Ventura, California. The project, which includes the purchase of the new Challenger all-digital platform, will be in support of transitioning Communication Services' 2,000 subscriber network on the Point Mugu Naval Air Base and surrounding Ventura County area from analog to an all-digital service.

The TVS Challenger platform delivers CATV multiplexing and signal-compression technology. The platform is designed specifically for independent cable operators with as few as 500 subscribers, to larger operators with 100,000 plus network operations. When receiving digital programs and applications direct from programmers it is possible, in the space of a single six-foot rack, for the Challenger to provide 200-300 programs. These program sources can be analog or digital programs. The outputs can be multiple carrier, 64/256 QAM outputs or ASI for transport to other locations. Platform configurations include subscriber management system (SMS), conditional access system (CAS), electronic program guide (EPG), and a range of set-top boxes.

"Bringing better quality of service, improved programming, and the ability to compete successfully against satellite providers and the phone company is what we can offer cable operators like Communication Services," said Norman Gillaspie, President of Transparent Video Systems. "As often happens, smaller markets such as our country's military bases are underserved, but now with our Challenger Platform, the smaller operators can afford to deliver digital programming their subscribers want."

Communication Services' initial launch includes 26 QAMs of all-digital SD and HD video for the Naval Base with plans for future expansion throughout Ventura County and will complement a full spectrum of MPEG-2 to MPEG-4 applications and current broadband services. The Challenger Platform will be integrated into their hybrid fiber coax cable infrastructure including microwave transmission to their 2000 subscriber network.

“TVS was an excellent choice for us — great technology, priced right, and a real ‘can do’ attitude that set them apart from the big guys,” said Phil Shockley, President of Coaxial Properties Inc (DBA Communication Services). “There were a number of positive things that made our decision easy, starting with the fact that TVS is based on open system standards, meaning I have a wide choice of set-top box manufacturers to choose from which keeps our costs way down. I like the fact TVS understands my business and is extremely responsive to all my calls and questions.”

About Communication Services

Communication Services has provided cable TV service in Ventura County since 1976. They operate a state-of-the-art system utilizing fiber-optics, microwave, and digital technologies, and are a local, employee owned and operated company that targets individual service as a priority. www.commservcable.com

About Transparent Video Systems

Transparent Video Systems is a leading provider of complete CATV headend systems, delivering both digital and analog content, and MPEG-2 to MPEG-4 ready applications. The TVS Challenger™ platform is a fully-integrated cable solution that enables telecom service providers, cable operators, and others to generate additional revenue, increase profits, and raise customer satisfaction by delivering advanced digital television services. Proven through more than a half dozen global deployments, TVS’s patented software and hardware technology is built on open standards, allowing providers easy customization of services and a high quality viewer experience at a fraction of a closed-standards system.
